ABSTRACT

Every 2 years, a student survey is conducted in the Los Angeles Community College District to determine students' educational goals and plans, enrollment and personal characteristics, financial resources, participation in curricular and extracurricular activities, progress toward goals, and evaluation of services and facilities. In 1989, the study design called for a 10% sample of students enrolled in spring semester classes at each campus in the district. To reach this goal, a 15% random sample of credit and non-credit class sections was drawn, and questionnaires were administered in class. Districtwide study findings, based on student responses in 83% of the classes, included the following: (1) nearly 30% of the students listed Business and Office Occupations as their greatest area of interest; (2) 40% indicated that preparing for transfer to a four-year college was their most important reason for attending college; (3) approximately 37% of the students indicated that an associate degree was their immediate degree objective, and 20% intended to transfer without obtaining an associate degree; (4) when asked about their most important reason for choosing their college, nearly 40% indicated that it was close to home and over 20% enrolled because of a specific program; (5) nearly 10% of the respondents had been enrolled at their college for nine semesters or more; (6) 10% of the respondents had a four-year university degree or higher; and (7) approximately 57% of the respondents lived in their own home or apartment. The bulk of the report consists of 82 district-wide graphs with corresponding data tables. The survey instrument is included. (JMC)

RESULTS OF THE SPRING 1989 STUDENT SURVEY

A Preliminary Report

PREFACE

This preliminary report on the results of the Spring 1989 Student Survey is being provided to information users at each of the campuses and the District Office. It includes a brief description of the sample, a copy of the survey instrument, graphs of districtwide responses, frequency distribution tables for each of the survey questions, and supplementary tables on educational goals and grade distribution from the data base.

This survey, conducted biennially since 1975 and substantially revised for the Spring 1989 administration, provides a major supplement to the information the District collects about its students. It is the only source of information on all students regarding their income, educational and degree goals, family background and evaluation of services. Because student identification was collected this year for the first time (with a 90% compliance rate), no questions needed to be asked for which data were already collected, leaving room on the survey for for "quality" questions such as time spent in the library or in student activities, or "background" questions such as native language, length of residence in the United States, and parents' education. With student identification in place, survey results can be used to analyze other student groups which can be identified in the data base, and which are large enough to be represented by the sample, such as matriculants, evening or full-time students.

The full report will include an analysis of districtwide responses by variations in student or enrollment characteristics, or by other survey responses. College-specific graphs are being prepared for inclusion in reports that individual colleges may want to generate. The Research Office will assist college staff who want to do additional analyses using survey data. Since more time will be required to complete the full report, this preliminary "bare bones" report is being distributed so that users can have access to the data in the interim.

If you know of others who would like copies of this report, or if you have comments or questions, please contact me or other staff members in the Office of Research, Planning and Analysis, Educational Services Division, at (213) 891-2056.

THE SAMPLE

The sampling goal was to obtain a ten percent sample of students enrolled in Spring 1989 classes at first census. In order to ensure that the ten percent goal was reached for every college location, a fifteen percent random sample of credit and non-credit class sections was drawn. This sample was adjusted for combined and short-term classes that didn't cross first census.

Eighty-three percent of all classes sampled returned student responses; this ranged from 100% at Mission to 54% at East. Actual responses were 14% of all districtwide first census enrollment. When these responses were "cleaned" for duplications and unusable returns, the percentage was 13.1, or 12,926 valid responses.

These responses were weighted to adjust for hours of attendance, since full- time students are more apt to be sampled than part-time students, and for college locations, where differences in response rates were evident. The numbers given in the tables presented in this report represent weighting up to the actual enrollment by hours at first census for every college. They include enrollment in both credit and non-credit classes (such as those for Amnesty or ESL beginning levels).

The following table compares actual and weighted samples.

ACTUAL SAMPLE AND WEIGHTED SAMPLE COMPARISONS

Actual/ Weighted	City	East	Harbor	Mission	Pierce	Swest	T-Tech	Valley	West	District
Actual	2198	1241	1110	607	2535	488	1690	2182	875	12926
% of total	17.0	9.6	8.6	4.7	19.6	3.8	13.1	16.9	6.8	100.0
Weighted	14439	12261	8119	5104	17016	4731	11480	17303	8558	99011
% of total	14.6	12.4	8.2	5.2	17.2	4.8	11.6	17.5	8.6	100.0
% Actual of Weighted	15.2	10.1	13.7	11.9	14.9	10.3	14.7	12.6	10.2	13.1

Weighted headcount figures were used for the tables in this report in order to suggest what the distribution of sample response would be if applied to total first census enrollment. Caution should be taken in interpreting specific variables which are very small percentages of responses for a single college, particularly if the college is small and if the response rate is low. At Southwest, for example, 5% of total response to a specific answer option would be 237 of the weighted headcount, but only 24 actual sample respondents. At Pierce, 5% would be 851 of headcount and 127 of sample respondents. In general, one can rely on a 5% response if the college sample size is 1,000 or more, but if less than that, a 10% response would be more stable. Many of the survey questions will be scaled, so that small response categories are offset with large ones. Also, consistency among colleges in the distribution of responses can serve to establish confidence in small sample size. If there is a desire for further information, sample sizes can be calculated by using the data in the table above, or a separate printout of weighted sample responses, rather than headcount responses, can be provided.

MAKE YOUR VIEWS AND OPINIONS COUNT!

If you have completed this questionnaire in another class, please do not answer it a second time.

In order to serve you better, we need to know about your educational goals, interests, background, and views on services and facilities. Your responses will be treated as confidential. This questionnaire should take about 20 minutes. Thank you for your time, effort and cooperation.

Please read these instructions carefully. If you have questions, ask your instructor for help:

1. An answer sheet is provided with this questionnaire. Select ONE response ONLY for each question, and mark the appropriate number on your answer sheet by filling in the circle completely with a soft lead pencil. Use only # 2 pencils.
2. On the LEFT side of your answer sheet, please fill in the following:
   a. IDENTIFICATION NUMBER: Please fill in your *STUDENT I.D. NUMBER*. Start in the left-hand column.
   b. SPECIAL CODES: This 6-digit code will be provided by your instructor.
3. Do NOT enter other identifying information on the left side of your answer sheet.
